WYSIWYG Web Builder supports multiple ways to create responsive web sites. So, what is the best way? There is not really a 'best way', it depends on your personal (or customer's) preference. For example, do you want to have full control over the layout or do you want objects to automatically scale? Here is an overview of the different design techniques that are available in the software:

[Responsive Text - WYSIWYG Web Builder](#)

To make a web page responsive it needs to be constructed in a different way. Unlike in standard WYSIWYG Web Builder layouts where you can drag & drop objects anywhere and where objects have a fixed size and position, mobile objects need to adjust to the width of the screen. In most cases this means that the object will use the full width of the page.
